

ENHANCED COMMUNITY-WIDE INTEROPERABILITY

The Mutualink platform enables organizations of all sizes to securely share voice, text, video and data for on demand interoperable communications and real-time information sharing, providing public safety agencies and mission critical operations the ability to respond rapidly and effectively and with an unprecedented level of situational awareness. The solution supports any type of media, giving users access to video, IoT sensors and other multimedia information, enabling intelligent decision making and coordinated response in any emergency or day-to-day event.

Native L3Harris ISSI inside Mutualink Fabric

Mutualink has implemented the L3Harris P25 Inter-Sub-System-Interface (ISSI) in their fabric, giving LMR customers the ability to link P25 networks to a hosted service with a standards-based solution. This can eliminate the need to maintain individual connections between neighboring systems and give agencies more control over ISSI-connected interoperability needs with dynamic mapping versus static mapping.

In addition to LMR interoperability, using the P25 ISSI also provides system owners with a path to interoperability with MCPTT users. Mutualink provides a native interface between LMR and MCPTT users.

FACT SHEET

Next-Gen Technology for an Unprecedented Level of Interoperability and Situational Awareness

Key Features

Intuitive interface with drag-and-drop function that allows agencies to join the platform and share information securely.

Invitation-based incident management allows participants to invite others to join a session — as and when required. Sessions can also be established automatically based on predefined rules and events triggered by integrated third-party sensors or systems.

Each organization maintains complete control over its resources, and is free to share and un-share information as the situation requires.

Users can share camera feeds, pictures, video streams, diagrams, floor plans, third-party applications and other media for a better common operational picture.

Seamless integration with panic buttons or other triggers acts as an alerting tool for automated notification and response.

Mutualink Enables:

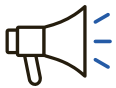

- True Interoperability® for LMR, LTE and VoIP interoperability
- Secure multimedia messaging
- Multi-source LIVE video sharing
- Push-To-Talk (PTT) groups across networks
- Data and file-sharing
- Drone and IoT sensor integration
- Real-time location mapping
- API integration

- ✔ Available via SaaS, Cloud-hosted, On-premise or Hybrid deployment

Designed For Your Communications

Mutualink instantly connects L3Harris radio users, VIP and Symphony™ consoles, and VIDA® systems to any device on any system upon invitation.

Communicate using any device across any network; analog radios, LTE/4/5G phones, digital or P25 radios, tablets or laptops.

NEXT-LEVEL AWARENESS

Deliver location and maps to users on network

- Safety
- Efficiency
- Speed

BUILD BRIDGES

Multimedia bridges across authenticated user devices

AUTOMATION/IOT

- Sensor inputs
- Video sharing
- Other integrations available

PUSH-TO-TALK APPLICATIONS

- Across LMR and LTE
- Multi-media, voice, video and data

COMMAND & CONTROL

- Extend L3Harris consoles to fielded frontline personnel
- Save IT investment
- Leverage all existing infrastructure
- Enhance capability of each device

The Mission Critical Alliance is a partner program for best-of-breed technology solution providers to openly collaborate to advance the capabilities, compatibility and security of mission critical solutions.
