

JADC2/ABMS

Joint All Domain Command and Control/Advanced Battle Management System

L3Harris brings innovative joint all-domain solutions to the fight that shorten kill chains, leverage world class assured, resilient communications, and seamlessly connect sensors, shooters and decision makers.

SPACE AS A WARFIGHTING DOMAIN

Space dominance demands architecting expertise that enhances joint capabilities at the top level. Our results are rapid discovery, sharing and reuse of architectural data across enterprise boundaries for complete architecture awareness and life-cycle cost savings. Our rapid reaction capability lets us turn a system designed for short-time use or testing into one that provides years of operational value.

MISSION INTEGRATION

L3Harris system-of-systems architecture is platform agnostic, data-centric and software defined, capable of hosting third party applications and retrieving open source data. Our multi-intelligence/multi-platform networking approach uses open messaging standards and software development kits to enable rapid capability integration and update across multiple security domains.

SECURE, RESILIENT COMMUNICATIONS

L3Harris builds kill webs with a federation of resilient, adaptive networks connecting an all-domain sensing grid capable C2 and battle management across all security levels.

ALL-DOMAIN SENSING

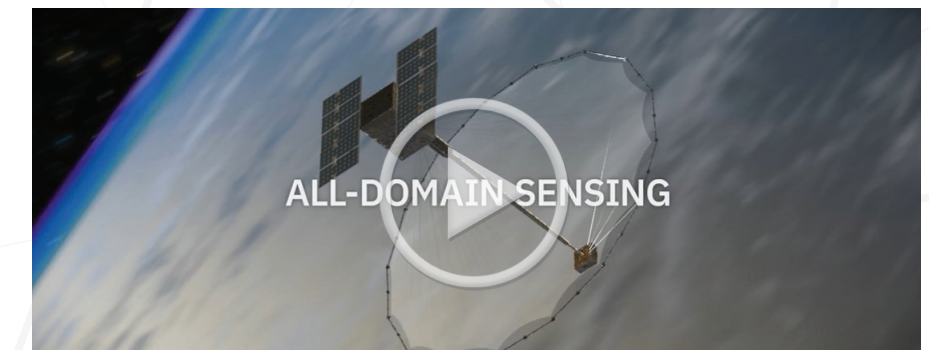

State-of-the-art strategic and tactical all-domain sensors with data fused at the tactical edge provide a foundational element to JADC2. L3Harris applies expertise with agile Model Based Systems Engineering (MBSE) across multiple domains and projects to build complex system-of-system solutions.

MISSION-READY SIMULATION

L3Harris' "game environment" provides theater-wide mission-level planning, exercise support, training, concept of operations development and decision making from tactical through strategic level operations. It depicts cross-domain interactions addressing engagements, missions and large-scale campaigns involving blue, red, gray and noncombatant white entities.
