

WITH SO MUCH ON THE LINE, TRUST P25 FOR SECURE AND SAFE COMMS

Legacy Digital MobileRadio (DMR) systems used to be “good enough,” but times have changed. As natural disasters, terrorism threats, and community challenges continue to evolve, the need to seamlessly communicate with multiple agencies across various networks has never been more important. Upgrading your mission-critical communications network to P25 — the gold standard for multi-agency voice and data communications — will help you rise to any challenge that comes your way.

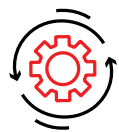

P25: GAME-CHANGING CAPABILITIES

CONTINUOUS CONNECTIVITY

In mutual-aid situations, P25 open standards ensure connectivity within and between organizations such as state and local public safety agencies, public works, and other utilities to restore services quickly and safely.

SEAMLESS INTEGRATION

The P25 standard provides unmatched flexibility for voice and data connectivity across current and emerging technologies including integrating LTE, GPS, and other applications with your P25 LMR system, regardless of manufacturer.

BETTER COVERAGE

Extends your communications reach to multiple area agencies. Engineered with advanced noise cancellation technologies to deliver clear, loud communications even in extreme environments.

BUILT-IN CYBERSECURITY

Unlike DMR, P25's built-in advanced end-to-end encryption and security protocols keep your network, information, and communications safe from outside interception and evolving threats.

FUTURE READY

Stepping up to P25 prepares you for the future, providing more options for integrating advanced technology than DMR solutions allow, including devices that support LTE, Wi-Fi, GPS and Mission Critical Push-to-Talk.

SMOOTH TRANSITION

P25 supports existing workflows with robust and secure two-way voice and data communications. There's little to no learning curve to get on board.

STAY SAFE. STAY SECURE. STAY CONNECTED.

WE'RE WITH YOU EVERY STEP OF THE WAY.
