MANTAWARE™ NETWORK MANAGER

Comprehensive Network Monitoring Solution

Gain unparalleled insight into the health, accessibility and real-time functionality of all IP-connected devices. Supervise network services and experience an intuitive visual representation of your system's performance.

INTRODUCING EASY BANDWIDTH MANAGEMENT SOFTWARE

Experience seamless bandwidth management with Network Manager's Network traffic analyzer. Gain insights into network traffic patterns and bandwidth usage through comprehensive support for flow protocols such as NetFlow, sFlow, j-Flow, and IPFIX. Ensure optimal network performance by monitoring bandwidth in real time and generating in-depth traffic reports to detect and resolve bandwidth issues before they impact your end users.

COMPREHENSIVE SERVER MONITORING — PHYSICAL AND VIRTUAL SOLUTIONS

Ensure peak performance of your servers with round-the-clock monitoring. Our service oversees a wide range of servers, including Hyper-V, VMware, Citrix, Xen, and Nutanix HCI, providing seamless server management 24x7. Experience optimal uptime and functionality.

SEAMLESS WI-FI NETWORK MANAGEMENT

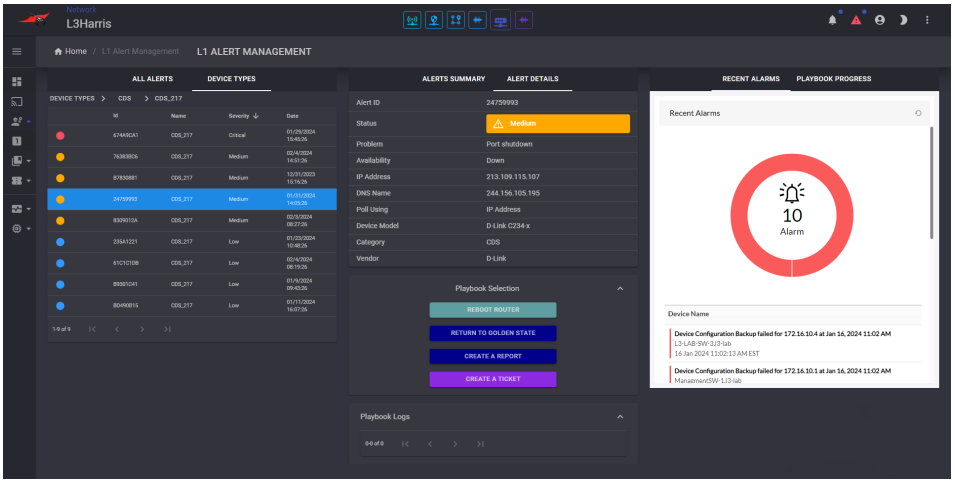
Effortlessly track wireless network analytics for access points, routers, switches, Wi-Fi systems and more. Keep tabs on Wi-Fi signal strength and network traffic with advanced tools.

WAN MONITORING SOLUTIONS

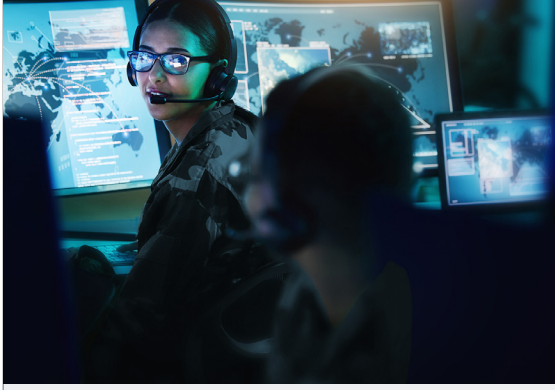
Revolutionize Wide Area Network connection management with a comprehensive solution. Use proven technologies to easily track and analyze WAN link availability. Swiftly resolve outages and optimize network performance to stay ahead of potential issues.

CISCO ACI MONITORING SOLUTION

Gain an all-inclusive perspective of your Cisco ACI ecosystem. Track crucial elements like fabric, tenants and endpoint groups for comprehensive monitoring.



Alert Management dashboard



KEY FEATURES

- Network Manager: integrated tool of the MantaWARE unified platform
- Bandwidth usage by applications: identify top bandwidth consumers by users, applications and protocols
- Advanced forensics: generate detailed reports for in-depth analysis of traffic data
- Reporting & capacity planning: schedule periodic traffic reports and track historical data for capacity planning
- Application mapping: customize application monitoring to effectively manage bandwidth usage
- ACL & CBQoS management: set service policies to prioritize critical traffic and validate QoS policies
- Security threats & attack detection: detect and classify security threats, DDoS attacks and zero-day attacks using network behavior anomaly detection

Network Manager offers additional features such as IP SLA monitoring, AVC support, QoS reporting, WLC reporting, billing and more. Streamline bandwidth management, reduce MTTR, and empower your network admins with Network Manager's user-friendly software.

L3Harris.com

STORAGE MANAGEMENT SOLUTIONS

Effortlessly keep track of your storage infrastructure. Seamlessly integrate with devices such as fiber channel switches, storage arrays and tape libraries for unparalleled insights.

FAULT MANAGEMENT SIMPLIFIED

Streamline fault management with a cutting-edge solution. Intelligently analyze network events, eliminate irrelevant data, and present clear and concise alarms. Alarms are visually distinguished and organized by severity levels for efficient issue resolution.

SWITCH PORT MAPPING SOLUTION

Monitor devices connected to each switch port in real time. Gain comprehensive insight into connected device details, virtual local area network data, port status, availability and historical switch port mapping. Effortlessly locate devices using advanced search capabilities and organize switches for convenient management.

EASY BANDWIDTH MANAGEMENT

Experience seamless bandwidth management with a network traffic analyzer. Gain insights into network traffic patterns and usage. Monitor bandwidth in real time and generate in-depth traffic reports to detect and resolve issues.

Additionally, our solution offers IP SLA monitoring, AVC support, QoS reporting, WLC reporting, billing and more. Empower your network admins to swiftly resolve bandwidth issues and reduce mean time to repair with easy-to-use bandwidth management software.

NETWORK CONFIGURATION MANAGEMENT

Streamline change management and gain full control over network configurations. Automate policy-driven change and configuration across your network devices. Effortlessly schedule configuration backups, identify real-time changes, automate tasks, prevent unauthorized changes, ensure security and compliance and resolve network issues with extensive reporting capabilities.

DISTRIBUTED NETWORK MONITORING FOR ENHANCED PERFORMANCE

Maintaining robust networks in complex, multi-distributed environments is essential for success. Continuous monitoring of distributed networks is made easy with our proxy-central architecture. Effortlessly monitor multiple remote sites, overcome network maintenance challenges, and gain comprehensive network visibility with reliable and effective distributed monitoring.

Upgrade your network management with Network Manager and experience comprehensive monitoring and management for servers, Wi-Fi networks, WAN connections, storage infrastructure and more.

Maximize uptime, optimize performance and streamline fault management. Take charge of your network configurations and gain full control over changes and compliance. Simplify distributed network monitoring for enhanced performance. Choose Network Manager for seamless network management.
